

TUTORIAL -2

Demonstration of a Paas Application: Creating a TrailblazerApp on Salesforce Trailhead

3/3/26

Bafna Gold

Date: Page:

Tutorial 3

- 1) creating a virtual machine
 - VMware Workstation Pro 12 was installed and launched
 - A new virtual machine was created using the custom option
 - Installation media was selected using an ISO file
 - The guest operating system and its version were chosen
 - The virtual machine was configured by allocating RAM, CPU cores and disk space
 - The set up was completed and OS was installed successfully.
- 2) installing Python on the virtual machine
 - The VM was started & and user logged into the OS.
 - For Linux: Python and pip were installed using terminal commands.
 - For windows: Python installer was downloaded
- 3) Part 3: - Running a Simple Python Program
 - A Python script was created to implement a basic machine learning model inside the VM.
 - Required libraries such as NumPy, Pandas, Scikit-learn was imported for data handling and model building.
 - A dataset was loaded and preprocessed by

handling missing values and selecting relevant features.

- The dataset was divided into training and testing sets to evaluate the model performance.
- A suitable machine learning algorithm (such as linear regression, logistic regression, or decision tree) was selected and trained using the training data.
- The trained model was then tested using the test dataset to make predictions.
- The performance of the model was evaluated using appropriate metrics such as accuracy, mean squared error, or precision.
- The program was executed successfully and the output confirmed that the ML model was correctly within the virtual environment.

ubuntu@ubuntu:~$ sudo apt install python3 python3-pip -y  
Reading package lists... Done  
Building dependency tree... Done  
Reading state information... Done  
python3 is already the newest version (3.12.3-0ubuntu2.1).  
python3 set to manually installed.
```

```
ubuntu@ubuntu: ~  
GNU nano 7.2 hello.py *  
print("Hello BMSCE. This is a demo text for display !")  
  
^G Help      ^O Write Out ^W Where Is  ^K Cut       ^T Execute   ^C Location
